

PLANAR

TM

When image experience matters.

“ Possibly the single most subtle LCD TV picture performance that money can buy ”*

“The post calibration CIE chart is as close to perfect as you could hope for and RGB levels read an ideal 100/100/100%... plenty of connection options... reproduces detail and colour subtleties that simply escape practically every other LCD TV we’ve ever seen... sensational purity... HD images look utterly pristine...no grain, no noise and no processing glitches... stunning fine detail and sharpness... motion handling is also spectacularly good... spectacularly vivid colours... arguably the most believable skin tones on LCD... strikingly good black level response... a sense of solidity that really puts the cinema in home cinema...”
